

YASKAWA

MV1000

The Efficient, Reliable Medium Voltage AC Drive

The Next Generation

Most MV Drives offer energy savings with improved process control. The MV1000 provides these features of course, but leapfrogs the industry with state-of-the-art features and outstanding reliability.

Building on past success, the MV1000 minimizes application and installation issues, by providing:

- Minimal Input Power Distortion (THD)
- Multi-phase Input Transformer with Galvanic Isolation
- Near Sinusoidal Output Waveform
- Proven Reliability with High Performance
- Compact Size
- User Friendliness
- Compatibility with Yaskawa A1000 LV Products

A History of the path we took to bring you the MV1000 Medium Voltage AC Drive:

Low-voltage drive

G7 7th generation low-voltage drive
(The world's first general-purpose drive employing three-level control)

1000 series
(J1000/V1000/A1000/P1000/U1000)

Medium-voltage drive

VS-686HV5 • 1996

Medium-voltage drive with multiple outputs connected in series
(first commercial product in Japan)

VS-686HV5S • 1998

VS-686HV5SD • 2002

MV1S • 2005

MV1000

Our Commitment to You

The MV1000 offers high performance and proven Yaskawa reliability. Based on the A1000 control platform, application flexibility is assured. Yaskawa's proven QC/QA processes offer the highest reliability in the MV drive industry.

Installation Friendly

- Power system friendly: 36-pulse input exceeds industry requirements; transformer provides isolation and makes drive insensitive to power line quality issues.
- Motor friendly: 17-level motor waveform suitable for standard motors

Proven Reliability

- Yaskawa's superior design and quality control provides reliability that is unmatched in the industry
- Highest MTBF = Lowest Life Cycle Cost (LCC)

High Performance

- Control platform based on hugely successful A1000 low voltage product
- Open loop vector (OLV) or closed loop vector (CLV) for control of the most difficult loads

Compact Design

- Optimal packaging facilitates transportation, installation, and maintenance

User Friendly

- Operation, adjustment, maintenance, and management are simple and intuitive
- Utilizes the same keypad as Yaskawa's 1000 series low voltage drives and a parallel parameter set

Global Standards

- Conforms with UL, CSA, IEEE 519 and other global standards

2.3 kV Models
200 - 2750 HP

3.3 kV Models:
175 - 4000 HP

4.16 kV Models:
300 - 12,000 HP

6.6 kV Models:
330 - 16,000 HP

11 kV Models:
Consult Yaskawa

Application Friendly

Reduced input harmonics combined with motor friendly output

Yaskawa Smart Harmonics™ Technology and PWM Control
Input Total Harmonic Distortion (THD) < 2.5% without filters!

Minimized Input Harmonics Exceed Guidelines

Yaskawa's original Smart Harmonics™ Technology incorporated in the MV1000 drastically reduces input harmonics.

The resulting input waveform is near sinusoidal, exceeding the requirements of IEEE519-1992.

No input filter is necessary.

Measured Harmonics and Input Current

Harmonic	5th	7th	11th	13th	17th	19th	23rd	25th	THD
IEEE 519 Limits	4.00%	4.00%	2.00%	2.00%	1.50%	1.50%	0.60%	0.60%	5%
MV1000 1000 HP 4.16 kV	1.28%	0.56%	0.34%	0.16%	0.03%	0.04%	0.01%	0.01%	2.26%
Typical 24-Pulse Scheme	2.60%	1.60%	0.70%	0.40%	0.20%	0.10%	1.90%	0.80%	3.80%

9/17 Level Output Waveform using Enhanced Cascaded H Bridge (CHB) Configuration

Configuration of One Power Cell

MV1000 uses multiple 3-level power cells and requires only 2 power cells per phase at 4.16 kV.

Cell Waveform

Output voltage of single power cell

Configuration of Complete Drive

Phase Waveform

Line to neutral voltage for 4.16 kV drive

Result is "9-level" waveform

Output Waveform

Line to line voltage for 4.16 kV drive

Result is "17-level" line to line voltage waveform applied to motor

PWM control with Enhanced CHB outputs a near sinusoidal waveform

- Minimal surge voltage (reflected wave phenomenon) protects motor insulation.
- Low torque ripple - smooth mechanical power transmission
- Low audible noise

Motor friendly output allows the use of existing motors without supplemental filtering, even at long lead lengths!

Proven Reliability

Yaskawa Quality and Reliability

Yaskawa's quality has always led the drives industry, and each generation builds on the last. The last generation medium voltage product (the MV1S) has a proven field MTBF greater than 300,000 hours.

The MV1000 builds on the previous generation MV Drives success using the same rigorous design rules and Quality Control/Quality Assurance (QC/QA) practices.

With ISO 9001 certification, a Supplier Rating Program, and rigorous testing, Yaskawa ensures that quality and reliability are designed in and built in. Field data confirms that calculated MTBF (Mean Time Between Failures) targets are exceeded in actual production units.

We're the only industrial drives and motion control manufacturer to win the Deming Medal, the most prestigious quality award in manufacturing.

Yaskawa constantly tracks and measures product failures in time (FIT). The actual FIT data demonstrates a high quality and reliability rate that is the envy of our Industry. This field data confirms that we do, in fact, exceed our design targets for reliability.

Yaskawa's overall FIT is based on the failure reports received from the field for a period of time, monthly (including Warranty and Non-Warranty items), and is as follows:

- $FIT = \text{Qty of Failures} / [(30 \text{ days} \times 24 \text{ hours per day}) \times (\text{total qty of units shipped})] \times 10^9$. Our calculations follow the Bellcore TR-332 Standard.
- MTBF is defined for a repairable system and is calculated as the inverse number of FIT mentioned above ($MTBF = 1/FIT$).

Cost Control and Quality Go Hand in Hand

Providing a high-quality product actually lowers manufacturing costs. Lean processes, rigorous inventory control, less defects and waste, fewer returns, and minimal repair and replacement translate to reduced costs that enable Yaskawa to offer a superior product at a very competitive price.

Kaizen: Continuous Improvement

Yaskawa has incorporated the Kaizen philosophy of continuous improvement into every facet of its operations. Kaizen literally means "change for the better". Key elements of the process are teamwork, personal discipline, improved morale, quality circles, and suggestions for improvement from all levels of employees.

The ultimate effects of the Kaizen process, elimination of waste and inefficiency, achieving discipline and standardization, mean that every day Yaskawa is improving the quality of its products while lowering costs.

Defect Prevention is the Key to Quality

Yaskawa manufacturing processes are designed to prevent defects. Production associates have paperless on-line resources at their workstations, providing highly detailed and up-to-date work instructions for every process step. Practice mechanisms are available in the Kaizen center for them to improve their assembly skills. Complex assemblies are made simple with the use of animations and video. All components are verified and approved before they are installed, and frequent in-process quality checks prevent a unit from moving down the line until quality is assured.

Yaskawa incorporates the Kaizen method of continuous incremental improvements along with our Total Quality Management processes to create a unique and highly effective approach to zero-defect manufacturing

Our internal assembly failure rate is 0.01% (assembly errors found in the actual assembly process)

The field assembly failure rate is 0.0062% (assembly errors that are found after the product is installed in the field).

Advanced Features

Precision Control and Stability

Open Loop Vector control enables smooth acceleration from low speed without using an encoder. Operation is stable, unaffected by fluctuations in load. The high performance vector control can be applied to synchronous motors as well as induction motors.

Starting Characteristics

Running Multiple Motors

The capability to run multiple induction motors in parallel with a single drive can reduce the size of the system as a whole.

Speed Search Function

Kinetic Energy Braking (KEB) Function

KEB (Kinetic Energy Braking) Function uses stored mechanical energy in the load to continue operation during a momentary power loss

Synchronous Transfer from MV1000 to Utility Power

Voltage Waveform Display

- Drive Output Voltage (green)
- Utility Supply Voltage (red)

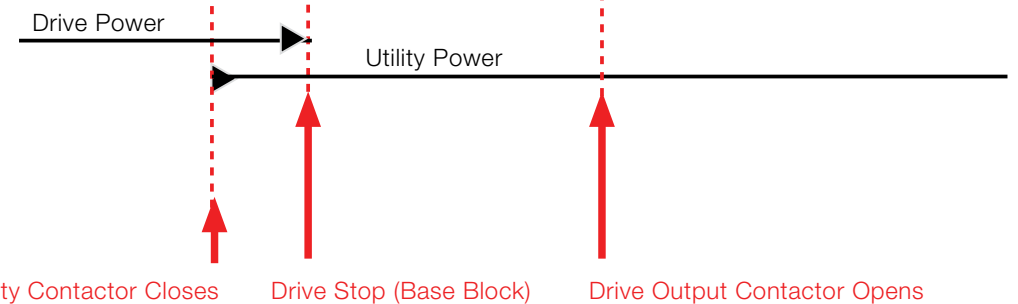

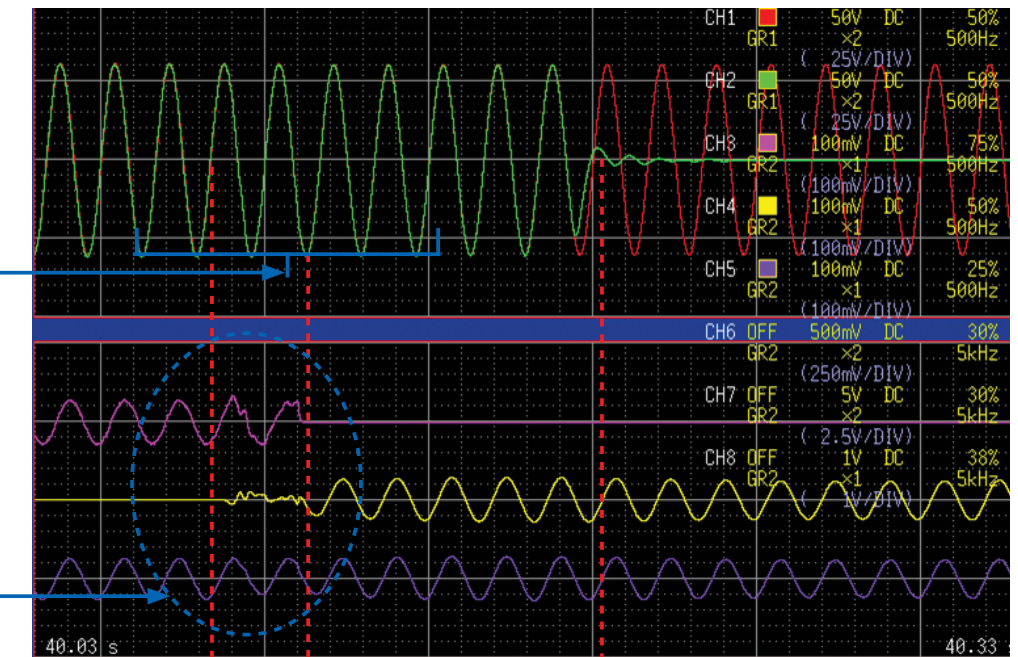

Utility and Drive Synchronized

Current Waveform Display

- Drive Output Current (purple)
- Utility Supply Current (yellow)
- Motor Current (blue)

No Disturbance to Motor Current During Transition

Transition from utility power to drive also available.

Other Important Design Features

- Power dip ride through
- Undervoltage trip at 70% of nominal input
- Automatic restart
- Auto tuning
- DC bus capacitors designed for over 20 years life
- Individual IGBT junction temperature monitoring (via keypad or over communication link)
- Proprietary patented transformer design

Optimal Packaging Design

Modular design with optimal footprint and maintainability

Typical Configuration of 1000 HP MV1000

Power Cell Section

- Two cells connected in series per single output phase
- Output phases are wye connected to generate the rated output voltage
- Each individual power cell can be drawn out for maintenance

Transformer Section

- Houses input and output power terminals and 36-pulse transformer

Cooling Fans

- Individual speed monitoring
- Redundant fan option

Control Section

- Houses the control boards and I/O interfaces, with roll-out drawer
- Communicates with power cell Is through fiber optic cables
- Low voltage circuit breakers for auxiliary circuitry
- Communication plug-ins and other options (same as 1000 series low voltage drives)

Typical Configuration of 2000 HP MV1000 with Input Switchgear

Input Switchgear

- Non-load break switch
- E-rated, current-limiting fuses
- Vacuum contactor for interrupting circuit
- All CSA/UL rated components
- Viewing window

Cooling Fans

- Individual speed monitoring
- Redundant fan option

• Multi-pulse transformer

• Two power cells per phase

User Friendly

Simple operation, adjustment and maintenance

Same User Interfaces as Yaskawa 1000 Series Low Voltage Drives

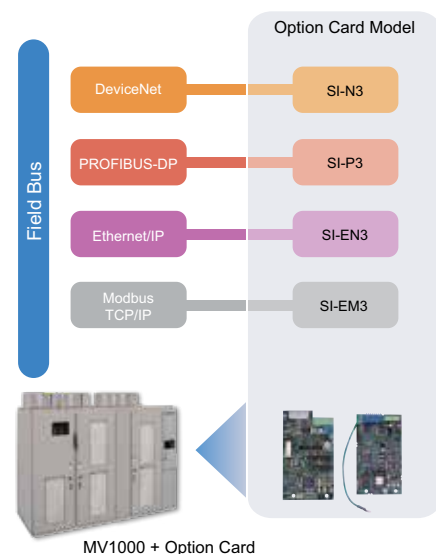

Digital Operator

A Digital Operator with an easy-to-view LCD display (the same as used on Yaskawa's 1000 series low-voltage drives) is provided on the front panel as standard, making it easy to operate and set the drive.

Network Compatibility

The RS-485 communication function (Modbus protocol) is installed as standard. By adding an optional communication card, major network protocols can be supported.

USB Copy Unit

Enables the copying and transfer of parameters between drives using simple operations. This unit can also be used as a conversion connector between the communication port (RJ-45) of a drive and a USB port of a PC.

Note: No USB cable is needed to copy parameters to other drives

DriveWizard Plus MV Programming Software

Provides support for a variety of adjustment and maintenance tasks

DriveWizard Plus MV enables consolidated management of the parameters for each drive on a PC. A variety of functions including monitoring, parameter editing, pattern operation, and oscilloscope functions facilitates adjustment and maintenance of the drives. In addition, the extensive trace and event log functions enable implementation of preventive maintenance and a quick response in case of a malfunction.

Parameter Edit

Displays and edits drive parameters

Autotuning

Automatically adjusts the motor-related parameters

Troubleshooting

Traces fault status and displays corrective action

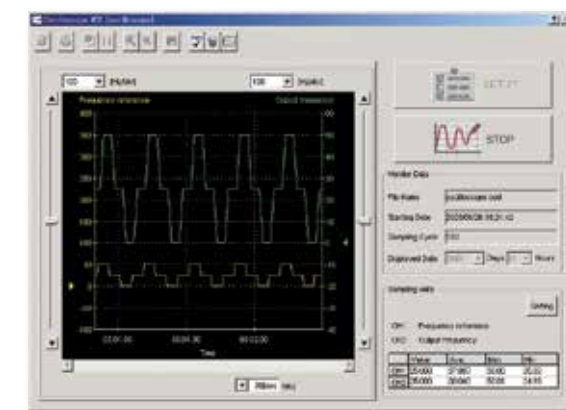

Pattern Operation

Runs the drive automatically in the preset patterns

Oscilloscope

Displays the monitor data in real time while the drive is running

Industries/Applications

Oil/Gas

Applications:

- Mid-Stream Compressors & Pumps
- Oil Field Water Injection Pumps
- High Efficiency Fracking Pumps

Water/Wastewater Treatment

Applications:

- Pumps
- Aeration
- Fans

Tire/Rubber

Applications:

- Banbury Mixers
- Extract Fans
- Conveyors

Mining

Applications:

- Slurry Pumps
- Ventilation Fans
- Conveyors

Power Generation

Applications:

- ID and FD Fans
- Conveyors
- Ball Mills
- Bag House Fans

Cement

Applications:

- Conveyors
- Fans
- Rotary Kilns

Chemical and Petrochemical

Applications:

- Pumps
- Compressors
- Extruders

Aftermarket Support

Global Field Service

Yaskawa's certified field assistance is available globally, whenever and wherever you need it. Not only will you be quickly up and running, but our service engineers will educate your team about the Yaskawa products on your machines.

We protect your investment beyond your immediate needs to maximize your machine's life cycle. Many of our business partners send their equipment all over the world. Regardless of where you send your equipment, Yaskawa can arrange for field support.

Technical Training Services

Yaskawa TTS surrounds our customers with training options by offering classes at Yaskawa training facilities, onsite at the customer's location as well as through the internet. Practical, hands-on training classes are held at our facilities. Factory onsite classes and Drives Road Show classes bring the classroom to the customer's site to eliminate the need for travel.

eLearning Modules and eLearning Videos are user-friendly, computer-based training lessons that are effective, time efficient, instruction that can be performed anytime or anywhere there is a computer or mobile device. This is a perfect way to get the training you need in the least amount of time.

Technical Phone Support

Unlike our competitors, Yaskawa provides technical phone support at no charge to our customers. Yaskawa provides Customer Technical Support utilizing certified engineers to answer your questions quickly and effectively. These engineers are supported by an online global knowledge base that can be accessed by our customers from the Support section of yaskawa.com.

Yaskawa America Inc. Technical Phone Support:

United States: 1-800-YASKAWA (927-5292), dial 2

Outside the United States: 1-847-887-7457, dial 2

Hours: 7:00am to 5:30pm (CST) Mon-Fri

Email: technical_support@yaskawa.com

Yaskawa Solution Center

The Solution Center is a self-service knowledge database providing all the functionality and content customer need to resolve issues themselves, immediately, 24/7.

Our goal is to provide an online center where you can quickly find support solutions managed by our technical support teams along with documentation already available on yaskawa.com.

Check it out at solutioncenter.yaskawa.com

Factory Repair

Yaskawa has the best repair turnaround, best repair warranty, and best repair pricing in the industry. Our team of certified repair specialists will repair your Yaskawa products using original parts and factory tested procedures in our state-of-the-art repair facility to ensure your products are returned in perfect working order. All repairs meet the standards established by our global team. Our service includes the latest software and Engineering Change Order upgrades, a thorough cleaning, and a full evaluation of all boards and component items.

Yaskawa's repair services are also accompanied by the best warranty in the industry. Call 1-800-YASKAWA for Repair Support or fill out the Repair Request Form at www.yaskawa.com

Exchange Inventory

Recognizing that maximizing uptime is critical, Yaskawa has the broadest range of exchange inventory in the industry that can be shipped at any time and to any location.

Parts Inventory

Unlike others who attempt to provide you with low quality replacement parts, Yaskawa's high regard for quality enables us to support your investment with the largest inventory of factory authorized replacement parts

Specifications

Common Specifications

Item		Specifications
Control Characteristics	Control Methods	V/f Control (V/f), Open Loop Vector Control (OLV), Closed Loop Vector Control (CLV)
	Frequency Control Range	0.01 to 120 Hz
	Frequency Accuracy (Temperature Fluctuation)	Digital input: within ±0.01% of the max output frequency (-10°C to +40°C) Analog input: within ±0.5% of the max output frequency (-10°C ± 40°C)
	Frequency Setting Resolution	Digital inputs: 0.01 Hz Analog inputs: 1/2048 of the maximum output frequency setting (11 bit plus sign)
	Output Frequency Resolution	0.001 Hz
	Frequency Setting Methods	-10 to +10 V, 0 to +10 V, 4 to 20 mA
	Starting Torque	V/f: 130% at 3 Hz, OLV: 130% at 0.3 Hz, CLV: 130% at 0 r/min
	Speed Control Range	V/f: 1:20, OLV: 1:100, CLV: 1:1000
	Speed Control Accuracy	V/f: ± 2 to 3%, OLV: ± 0.5%, (25 °C ± 10 °C), CLV: ± 0.02% (25 °C ±10 °C)
	Speed Response	OLV: 10 Hz, CLV: 50 Hz
	Accel/Decel Time	0.0 to 6000.0 s (4 selectable combinations of independent acceleration and deceleration settings)
Protection Function	Motor Protection	Electronic thermal overload relay
	Momentary Overcurrent Protection	Drive stops when output current exceeds 132%
	Overload Protection	Drive stops after 60 s at 110% of rated output current
	Overvoltage Protection	Power Cell VPN > 1035 VDC
	Undervoltage Protection	Power Cell VPN < 300 VDC
	Momentary Power Loss Ride-Thru	Resumes operation if power loss is less than 2 s (standard) (UPS Required)
	Overheat Protection	Power Cell = Thermistor, Transformer = PT100 and Thermal Switch
	Ground Fault Protection	Electronic circuit protection
Operating Environment	Ambient Temperature	-5 to +40°C (up to +50°C with output current derate)
	Humidity	95% RH or less (no condensation)
	Storage Temperature	-20 to +60 °C (short-term temperature during transportation)
	Altitude	Up to 2000 m without derating, up to 4000 m with output current and voltage derating
Comm. Options	Communications Protocols (Optional)	EtherNet/IP, DeviceNet, Modbus TCP/IP, Modbus RTU, PROFIBUS DP, and PROFINET
